A Straight Read on *Your Compound*

His objective: 120–150 are · elevated, west-facing · freehold · tourism-zoned · off-market · **350–430M IDR/are**

CONFIDENTIAL · PREPARED FOR MR. Q

About myself. Five years sourcing and closing land and villa transactions across Bali, Lombok, Nusa Penida and Nusa Lembongan for Bali Exception, leasehold and freehold, working directly with our in-house legal team on PT PMA structures, permits and the handover into construction. I work in partnership with brokers across Bali to find the best opportunities for my clients, one of the reasons for my success today. A few villas and land sourcing I've closed personally are linked at the bottom.

UNDERSTANDING Q'S PROJECT

Ocean views, non-negotiable. Elevation decides this, more than the address.

One compound, connected underground. Staff and service tunnels link the villas below ground, not just shared grounds.

A full amenity compound. Padel court, spa and gym alongside the villas.

Built for decades, not seasons. Poured concrete / ICF-style walls, not brick infill, meant to outlast Bali's standard and pass to his children.

Beachfront is a plus, not a requirement. Good to have, not the deciding factor.

One family compound, not one villa. A master villa for family, three to four smaller villas for friends.

A hybrid model. Personal use two to three months a year, rented out the rest to cover the investment.

Bringing his own equipment. Construction machinery self-imported from China, drawing on his manufacturing background.

MY RECOMMENDATIONS

Tabanan

- Beachfront land available
- Black sand beaches
- Better access to water

Bukit

- Elevated, with ocean views from multiple angles
- White sand beaches
- More of a surfer vibe, closer to social life and restaurants
- Harder, lower-quality water access, being higher up
- A more hyped-up area

Key challenges:

- **Self-imported machinery** (cost and knowledge on how to use). No local spare-parts chain for Chinese-branded equipment.
- **The right workforce** to commit to your quality.
- **Underground tunnels** and Bali's wet season and humidity.
- **ICF / poured-concrete walls.** Bali sits in a seismic zone with inconsistent batching-plant quality.
- **Your price band, tested.** At 350–430M/are, ocean-view land in Uluwatu runs closer to 600M/are, Tabanan beachfront closer to 800M–1B/are. Land exists at your number, but you'll need someone with the right contacts to find it.

THE BUYING PROCESS, START TO FINISH

EST. TIMELINE: 18 TO 24* MONTHS

1. Sign a buyer's agent agreement, define scope
2. Find the plot, negotiate
3. Legal partners for due diligence
4. Architect and construction partners, negotiate
5. Sign the deed of purchase
6. Import / manpower authorization, if needed
7. Find the right management partner
8. Break ground, through to handover

*Based on high end construction, depends of construction technology

Villas I've closed personally: Windsor House ↗ (listed $2M, closed $1.36M) · Element Bali ↗ (sourced and negotiated a 5,000m² plot, central Canggu, for this branded development)

I know you're not here to browse listings. You've got several projects ahead of you and you're looking for one advisor to partner with long term, someone you can hand a real mandate to and trust to be straight with you. If we commit to that as a true partnership, I will commit to source the best plot of land and help you within my expertise and the scope we define.
